

LLM EVALUATION APIs EXECUTION

Health Check:

The screenshot displays a REST client interface for a 'Backend Health Check'. The request is a GET to the endpoint `{{baseUrl}}/health`. The response is a 200 OK status with a response time of 67 ms and a body size of 666 B. The response body is shown in JSON format, indicating the system is healthy and providing details about the service, version, environment, and available providers.

Faithfulness: Partial score

The screenshot displays a REST client interface with a POST request to `{{baseUrl}}/api/eval-only`. The request body is a JSON object with the following structure:

```
1 {
2   "metric": "faithfulness",
3   "query": "As a security-conscious user, I want to enable two-factor authentication (TOTP) on my
4     account so that my account is protected from unauthorized access.",
5   "output": "TC1: Verify MFA setup generates a scannable QR code for authenticator apps.TC2: Verify a
6     valid 6-digit TOTP code completes setu.TC3: Verify a valid 6-digit SMS code also completes setup as
    an alternative to TOTP.TC4: Verify account locks for 30 minutes after 5 consecutive failed attempts.
    ",
7   "context": ["MFA setup generates a TOTP secret and QR code compatible with standard authenticator
8     apps. ||| User must enter a valid 6-digit TOTP code to complete MFA setup. ||| After 5 consecutive
9     failed MFA verification attempts, the account is locked for 30 minutes."]
10 }
```

The response is a 200 OK status, received in 2.45 seconds with a body size of 2.47 KB. The response body is a JSON object with the following structure:

```
1 {
2   "metric": "faithfulness",
3   "score": 0.75,
4   "verdict": "FAITHFUL",
5   "explanation": "The score is 0.75 because the actual output mentions using a valid 6-digit SMS code as
6     an alternative to TOTP for setup, which is not mentioned in the retrieval context, indicating a
7     moderate level of faithfulness.",
8   "output": "TC1: Verify MFA setup generates a scannable QR code for authenticator apps.TC2: Verify a
9     valid 6-digit TOTP code completes setu.TC3: Verify a valid 6-digit SMS code also completes setup
10    as an alternative to TOTP.TC4: Verify account locks for 30 minutes after 5 consecutive failed
11    attempts.",
12   "detail": {
13     "truths": [
14       "MFA setup generates a TOTP secret and QR code compatible with standard authenticator apps.",
15       "A valid 6-digit TOTP code is required to complete MFA setup.",
16       "After 5 consecutive failed MFA verification attempts, the account is locked for 30 minutes."
17     ],
18     "claims": [
