

BATCH EVALUATION

Overview

Batch Evaluation enables users to evaluate multiple Large Language Model (LLM) responses in a single execution by uploading a spreadsheet (Excel/CSV), eliminating the need to evaluate each response individually.

The feature supports multiple evaluation metrics, allows different metrics to be applied per row, and generates comprehensive downloadable reports containing scores, verdicts, explanations, and token usage statistics.

 This JSON is ready to be used for batch evaluation in Step 3

Evaluation Metrics from Excel

The "Metrics" column in your Excel file will be used for each row's evaluation. Each row can have a different metric (faithfulness, answer_relevancy, etc.). Rows with NA or missing metric values will use [answer_relevancy](#) as default.

[⚡ Run Batch Evaluation](#)

 Click to evaluate all 7 records using metrics from the "Metrics" column
