

CREATING THE CUSTOMIZED UI PAGE WITH LANGFLOW CHAT

Objective:

Creating a customized html page - AI powered testcase generator using the langflow embedded chat and vibe coding with ICEPOT Prompting technique.

Below is my Prompt which I gave for generating the UI

Context: You are a Frontend developer who is going to build a web page for a Test case Generator.

I have already the Langflow created and running in my local. I want you to use the Langflow Chat Interface for building the Tool.

*I need to give the input in Embed Langflow chat interface and it should connect using can link which is given below and provide the output.***INSTRUCTION**

1) [CRITICAL] - Embed the Langflow chat interface for Testcase generation at top right with proper css styling and also proper alignment .

```
<script src="https://cdn.jsdelivr.net/gh/langflow-ai/langflow-embedded-chat@main/dist/build/static/js/bundle.min.js"></script>
```

with host_url,flow_id and API Key

```
host_url="http://localhost:7860"
```

```
flow_id="b395702a-9bc0-4a7b-94da-9a0a9597baf7"
```

```
api_key="sk-khRGYF7basHusc_TGA5dpf-tw4KzVb7_vYyddMYEE2Q"
```

- 2) [MANDATORY] - Add Heading of the Tool as KYRO TEST GEN - AI POWERED TESTCASE GENERATOR
- 3) [MANDATORY] Chat has to be opened by default and the chat window should be from top of the screen to bottom with the default width
- 4) [MANDATORY] Give the user friendly instructions on how to use the Testcase Generator in the left side of the page
- 5) [MANDATORY] Give an option to copy paste the sample user stories for the user.
- 6) [MANDATORY] Implement clear option to clear the chat
- 7) [MANDATORY] Implement copy option to copy the chat output
- 8) [MANDATORY] Add a button to download the results as a excel file
- 9) [MANDATORY] Add Proper scrolling options with scroll bars
- 10) [MANDATORY] Add Thinking when you are generating the output
- 11) [MANDATORY] I want you to use rgb(12, 35, 64), rgb(255, 255, 255) as theme for the HTML page; Use this background colour for the header kind of thing. background-color: rgb(12, 35, 64);Text as color: rgb(255, 255, 255); when the background is rgb(255, 255, 255) use this text colour rgb(12, 35, 64)
- 12) [MANDATORY] - Have the request and response in the light shades of blue which co ordinates with the theme colour.
- 13) [MANDATORY] - Give the chat name as Kyro QA Genie
- 14) [MANDATORY] - Create all these requirements as fully functional single
-page HTML UI for an AI-powered Testcase Generator

Example:

Sample Banking Domain User Stories to include:

1. As a customer, I want to transfer funds between my accounts so that I can manage my money efficiently.
2. As a customer, I want to view my transaction history for the last 90 days so that I can track my spending.

Output:

- 1)All HTML structure in one file
- 2)The Langflow chat widget script and embed configuration
- 3)No external dependencies except the Langflow CDN script

I executed using Codex in Plan mode. Below was the plan that was suggested by Codex

KYRO Test Gen Single-Page UI Plan

Summary

Build one standalone `index.html` that renders a two-pane responsive webpage for the testcase generator:

- Left pane: branded instructions, sample user stories, usage guidance, and utility actions.
- Right pane: embedded langflow-chat widget, pinned top-right, open by default, full viewport height, titled Kyro QA Genie.
- No external runtime dependencies beyond the Langflow CDN script.

Implementation will follow Langflow's documented web-component embed pattern and supported props such as `host_url`, `flow_id`, `api_key`, `start_open`, and `window_title`. References: [Langflow embed docs](#), [Embedded chat repo/props](#)

Key Changes

- Create a single-file HTML app with inline CSS and inline JavaScript only.
- Use a full-height layout:
 - Left content column fills remaining width and scrolls independently.
 - Right chat column is fixed to the top-right, spans 100vh, and keeps the widget visible from top to bottom.
 - On smaller screens, stack the instruction pane above the chat pane while preserving chat usability and scrollbars.
- Apply the requested theme consistently:
 - Primary dark: `rgb(12, 35, 64)`
 - Primary light: `rgb(255, 255, 255)`
 - Message bubbles and cards use coordinated light blue shades for request/response areas.
- Add a branded header area in the left pane with the exact title:
 - KYRO TEST GEN - AI POWERED TESTCASE GENERATOR
- Embed the Langflow widget with the provided config:
 - `host_url="http://localhost:7860"`
 - `flow_id="b395702a-9bc0-4a7b-94da-9a0a9597baf7"`
 - `api_key="..."`
 - `start_open="true"`
 - `window_title="Kyro QA Genie"`
 - Keep widget width at the component default unless CSS containment requires a fixed column width.
- Add user guidance in the left pane:
 - Short "How to use" steps.
 - Best-practice tips for pasting user stories.
 - Expected output guidance so users know what kind of testcase response to request.
- Add a sample user stories block:
 - Pre-filled banking-domain sample text in a readonly textarea/card.
 - Copy Sample Stories button copies sample content to clipboard.
- Add chat utility controls near the widget:
 - Clear Chat: reset the embedded session by recreating the langflow-chat element with a fresh session id.
 - Copy Output: copy the latest assistant response, or full transcript if no isolated assistant message is available.
 - Download Excel: export results into an Excel-compatible file generated in-browser.
- Excel export behavior:
 - Always export at least one worksheet containing the conversation transcript.

- *If the latest assistant output contains a markdown-style table, parse it into structured rows in a Test Cases sheet.*
- *If no table exists, place the latest response line-by-line into the worksheet so the file is still useful.*
- *Use a browser-generated Excel-compatible .xls or SpreadsheetML file so no third-party library is needed.*
- *Add “thinking” feedback:*
 - *Show a themed loading banner/spinner such as Kyro QA Genie is thinking... after a user submission and hide it when a new assistant response is detected.*
 - *Detect this by observing widget DOM updates and message count changes.*
- *Add scrolling and usability polish:*
 - *Visible scrollbars for left instructions and chat-adjacent transcript/control areas.*
 - *Sticky utility bar for the chat actions.*
 - *Clear empty/error states for clipboard or export failures.*

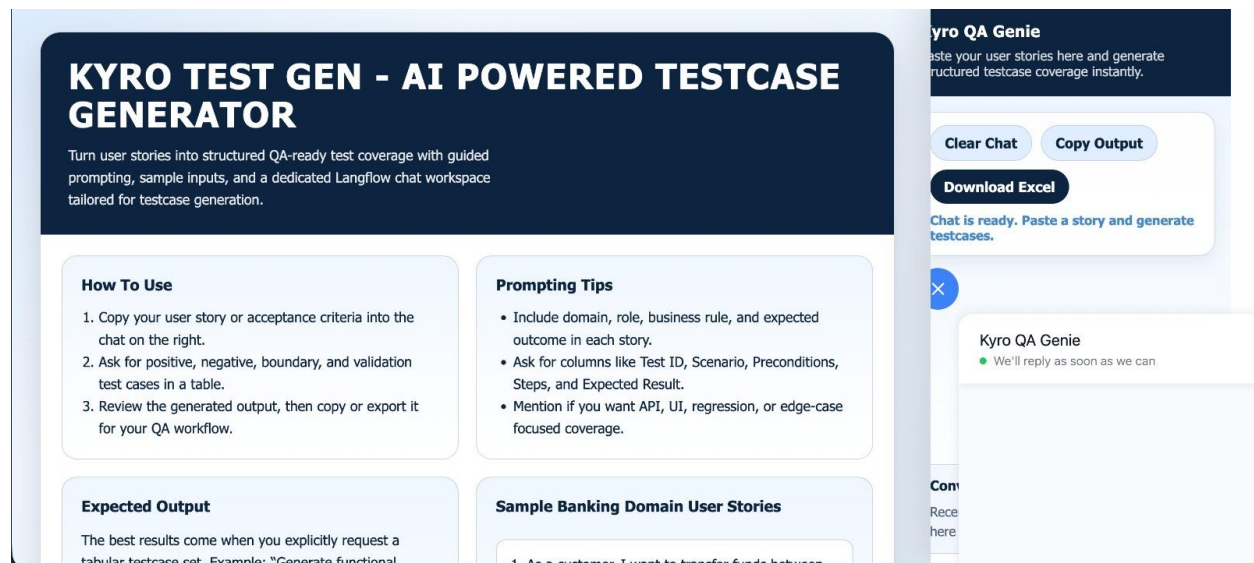

Test Plan

- *Page loads from a single HTML file with no missing assets except the Langflow CDN script.*
- *Header text, theme colors, and left/right alignment match the requirement.*
- *Chat widget appears on the top-right, is open on first load, and spans the viewport height.*
- *Sample stories can be copied successfully.*
- *Sending a prompt shows the “thinking” state and then hides it when the response arrives.*
- *Clear Chat removes prior conversation and starts a fresh session.*
- *Copy Output copies assistant content accurately after a response is generated.*
- *Download Excel downloads a valid Excel-openable file with transcript content and structured testcase rows when the response contains a table.*
- *Left pane and chat-related areas both scroll correctly on desktop and mobile-width layouts.*

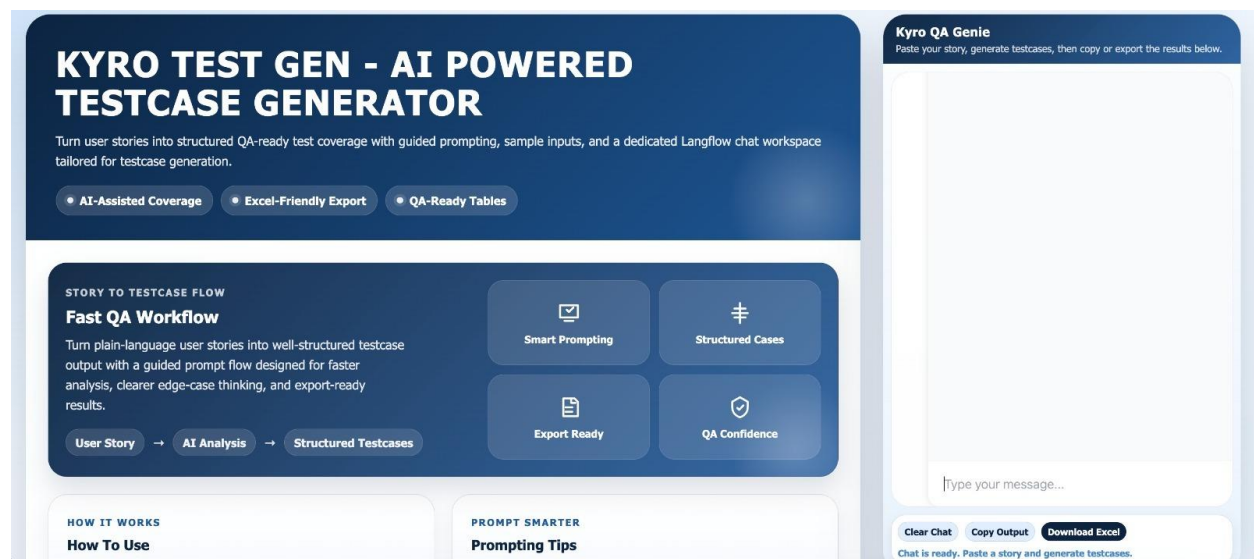

Assumptions And Defaults

- *Deliverable is one standalone index.html; no framework, build step, or separate CSS/JS files.*
- *The provided <http://localhost:7860> endpoint is intentionally local; even though Langflow docs recommend HTTPS for deployed usage, local HTTP is acceptable for this page.*
- *The API key will be embedded client-side because the requirement explicitly asks for a pure single-file frontend; this is acceptable for the local-only use case but should not be reused unchanged for a public deployment.*
- *Copy Output, Clear Chat, and Thinking indicators will be implemented by observing and controlling the embedded widget instance externally rather than modifying Langflow itself.*
- *Excel export prioritizes reliability over perfect testcase schema inference; transcript export is guaranteed, and table parsing is an enhancement when the model returns structured output.*

I executed the plan with chain of thoughts. On executing the above plan below output was given by AI.

After doing iterative prompting I was able to achieve below output.

You can then copy the response or export it into an Excel-friendly format from the chat tools.

SAMPLE INPUTS

Sample Banking Domain User Stories

Story 1

[Copy](#)

As a customer, I want to transfer funds between my accounts so that I can manage my money efficiently.

Story 2

[Copy](#)

As a customer, I want to view my transaction history for the last 90 days so that I can track my spending.

Kyro QA Genie

Paste your story, generate testcases, then copy or export the results below.

[Generate test cases for Fund transfer](#)

TC_BT_001 Title: Verify successful fund transfer within daily limit Preconditions: User is logged in with an active account Steps:

1. Navigate to Fund Transfer
2. Enter beneficiary details
3. Enter amount within daily limit
4. Submit transaction Expected Result: Transaction completes successfully and confirmation is shown

TC_BT_002 Title: Fund transfer with beneficiary not found Preconditions: User is logged in with an active account Steps:

1. Navigate to Fund Transfer
2. Enter invalid beneficiary details
3. Enter amount within daily limit

[Clear Chat](#)[Copy Output](#)[Download Excel](#)

Chat is ready. Paste a story and generate testcases.
